TDC Mobile Opens its 3G Network

7 November , 2005

Europe: TDC Mobile opens its 3G network for residential customers. Thus, all existing and future residential and business customers and also TDC's Duet customers will have access to mobile broadband cards, increased speed and video telephony on their 3G phones. Already on October 3, TDC Mobile's business customers got access to the higher speeds via the mobile broadband card.

3G equals higher speed on the mobile network. Both for the laptop PC and for the mobile phone. All TDC Mobile customers automatically get access to the 3G network and the new increased speeds with their SIM cards. It only requires that they purchase a mobile broadband card or a 3G mobile phone.

As regards the laptop PC, it means that via a mobile broadband card from TDC Mobile, customers can surf the Internet with speeds up to six-seven times faster than what they are used to from the mobile network.

"We have chosen to introduce the new speeds and possibilities based on what customers already know from their PC's at home: email and surfing the Inter-net. That is why we offer our customers a mobile broadband card making it possible for them to be online with their laptops when on the road and away from home: in the bus, at the cafe or in the park. No more looking around for network plugs or struggling with connecting the laptop with the mobile phone", says Anders B. Christjansen, Senior Vice President in TDC Mobile.

"With a 3G mobile phone the higher speeds mean that our customers get fa-ster access to TDC Mobile's mobile portal Fly and other Internet pages via their mobile phone. And customers get access to the increased speed without having to renounce the good coverage on speech, supplied by TDC today," says Anders B. Christjansen and continues "at the same time our customers will experience that it becomes easier to use email on the mobile phone, just as both residential and business customers now may experience video teleph-ony with their 3G mobile phones.

To make the faster speeds and new services available for a large public, TDC Mobile cut more than half of prices on data transmission back at the begin-ning of September.

The 3G network has coverage in the four largest Danish cities and is devel-oped on an ongoing basis. You may read more about prices, products and coverage at tdcmobil.dk.
